
P

Historical data is available for all asset classes. WebStation maintains data based on the following schedule:

Tick data for 21 days

Five-minute bars for one year

Daily pricing for five years

Weekly pricing for 7-10 years

Monthly pricing for 17-25 years

News headlines stream in worldwide from hundreds of different newswires. Dow Jones News is bundled with WebStation, as well. In-depth research and commentaries are provided by organizations such as FirstCall and Dow Jones. All this provides users with textual analysis to accompany numerical information.

Usability

WebStation is designed to emulate a typical web browser so users can point and click to get to the data they need. The WebStation interface is laid out intuitively enough that with a little practice users will easily be able to navigate around the database. Three features on the screen will help u

Price

Accessing WebStation costs \$300 per password per month. That includes access to the data as well as access to the help desk. The help desk is staffed round the clock and I do recommend taking full advantage of the service.

Summing up

WebStation delivers tons of data through a user-friendly interface. Students and faculty will enjoy this customizable product. With everything being delivered over the Internet, no software needs to be downloaded or updated.

There are many, many features of WebStation that I didn't mention above, so if you're interested in finding more information try the following

website: <http://www.moneylinetelerate.com/products/webstation.jsp>

Of course, you can also contact Christopher Powers at Moneyline Telerate for further information:

E-mail: Christopher.Powers@moneyline.com

Reuters BridgeStation

Content

Reuters BridgeStation provides data, analysis, news, and charts for stocks, bonds, mutual funds, options, derivatives, and money markets. Once again, international coverage is quite thorough; virtually any equity that is traded worldwide will be found in BridgeStation. Users can see trades as they happen on international exchanges as well as local exchanges.

BridgeStation delivers news and analysis along with the data. Of course, the complete Reuters news service is provided along with all the major business newswires.

One of the best features of BridgeStation is the Athena Graphics charting application. Use this powerful tool to create charts and analyze trading behavior. Historical data is available through Athena and retained in the system based on the following schedule:

Tick data for 21 days

Five-minute bars for up to 50 days

Monthly data for up to 20 years

Usability

BridgeStation, while not exactly like the old Bridge Telerate product, maintains a close resemblance to its immediate predecessor. Anybody who used the old system will recognize the general layout and look of BridgeStation. It is a very complex system which takes a bit of practice to get familiar with.

Navigating BridgeStation can be challenging. Some point and click navigation is available. Reuters recently added the Personal Navigator to help users drill down to specific data. However, there are still plenty of opportunities to type in codes.

BridgeStation allows the user to have many different frames open concurrently. Users can open a set of frames and save them in a workspace. Workspaces can be saved for future use.
